

Construction Materials

Your Guide for Safe Disposal and Recycling in Calumet County

How do I dispose of construction waste?

Construction materials are generally too big to be disposed of in your regular curbside pickup. The best way to dispose of construction waste is to rent a dumpster. Most dumpster rental places offer different sizes of dumpster depending on the size of your project.

All non-hazardous waste can be thrown in a dumpster.

Materials considered hazardous that need proper disposal include:

- Asbestos
- Lead
- Silica
